ABSTRACT

The ultimate aim is to make more returns unmindful of what you have. Swapscan is an advanced Uniswap explorer which helps you find the best DeFi (Decentralized Finance) schemes listed on Uniswap. The cry[pt]o players either big or small can make use of Swapscan's service to find the best investment schemes in the market. You can maximize your results without any hustle. Decentralized Finance is the wild west of investment systems and it offers you the best in class returns when compared to the traditional investment schemes out there that never seem to be fruitful to the investors.

“ Progress is impossible without change;
and those who cannot change their
minds cannot change anything ”

INTRODUCTION

Blockchain technology's advent has disrupted the flow of the traditional market. It altered the way how systems work. This fits well for investment and financial systems as well. The traditional investment systems were proven costly due to the presence of a number of third parties and brokerages that gather filthy commissions from the investors. Cryptocurrency becomes a modern solution to traditional problems. The major innovation of blockchain technology is decentralized finance, which will revolutionize the investment systems existing in the market today. DeFi (Decentralized Finance) will make a game-changing impact on different economic dimensions of the world.

Swapscan allows you to explore pools and pairs in the Uniswap to address the flaws in the current investment systems. Swapscan makes it possible for the people who are unbanked or who are from underdeveloped nations to get access to the best-decentralized finance schemes in the market.

OUR MISSION

“Swapscan was founded with the penultimate aim of taking the benefits of decentralized finance to everyone in the world. Investment is a basic need and we help people take right choices.”

OUR VISION

“Develop robust & innovative Uniswap explorer that counters the existing centralized banking solutions and offers people with transparency, ownership & self-reliance”

DEFI HAS THE ULTIMATE POTENTIAL

DeFi has the potential to create a decentralized and global alternative to the investment services that exist today. DeFi overall includes decentralized exchanges (DEX), staking protocols, lending, and yield farming. Investment is no more a luxury. If you need to make a proper living, you must invest. Investment is not meant only for elite community people. With the advent of DeFi, literally, everyone with a smartphone and active internet connection can access the best investment schemes. In this digital era, having unbanked people shouts out the failure of traditional investment systems.

DeFi ensures transparency and security to the investors. Rules and regulations in the DeFi system cannot be manipulated as they are programmed as smart contracts. Smart contracts are nothing but magical lines of code that are written to automate a particular task. If the conditions in the smart contracts are met, the rewards will be automatically distributed to the investors without any human intervention, making the process genuine and error-free. Also, the use of blockchain technology enhances data audibility and data ownership.

WHAT MAKES DEFI UNIQUE?

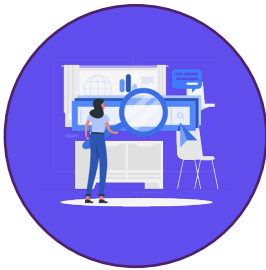

DeFi has been the best application of blockchain technology and has revolutionized the process of investment. Nothing can beat the DeFi applications when it comes to liquidity. Also, DeFi investments do not have any custodians or brokerage. As an investor, you directly put your assets against the smart contracts and get rewarded for your service. DeFi investments are also permissionless, i.e. they are open to everyone and the investors do not require any special permission to join the pools. Permissionless liquidity protocols allow users to get good returns. It is possible for anyone to earn passive income from their crypto assets.

SWAPSCAN - THE BEST IN CLASS UNISWAP EXPLORER

In the earlier days, there were only two things that you could do with your crypto assets. Either you can hold them idle in your wallets or you can trade them to earn good returns. But Swapsan offers you the best alternative to these activities. You can put your assets to work and earn passive income from it by investing them in the right DeFi pools listed on Uniswap. With Swapsan you can get to know the list of liquidity pools that gives greater rewards to the liquidity providers. You can also explore the pairs listed on Uniswap as well. If you are getting your feet with cryptocurrency, you may not be in a position to make a good trade at the right time. Earning from cryptocurrency is no easy task. It requires a lot of experience and you are in a position to keep track of the market trends to trade your assets whenever they are high. But being a beginner, buying or selling the wrong assets or at the wrong time might put an end to your cryptocurrency at the beginning. You cannot afford to lose your assets like that. Swapsan offers you the list of best DeFi pools in the market where you can put your assets without any fear of losing your assets. The list of pools suggested by Swapsan is trustworthy is always fruitful to the investors.

FEATURES OF SWAPSCAN

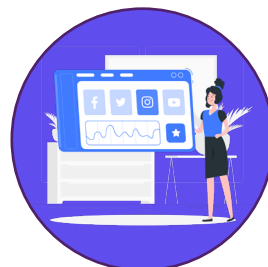

Swapscan offers amazing features for its investors with the intention of making their crypto investment journey, a successful one. Here is what you can expect in the features of Swapscan

Uniswap pool explorer

Uniswap Pair Explorer

Advanced Analytics Tool

1) UNISWAP POOL EXPLORER

Swapsan allows you to explore all uniswap dex pools, total liquidity provided, fees earned, pooled tokens, and other advanced details.

What is a liquidity pool?

Liquidity mining is one of the easiest ways to earn passive income from your crypto assets. You can lock up your assets in the list of liquidity of pools listed by Swapsan to get rewards. The analogy is so simple. It is similar to how you get interested in depositing your funds in banks or any other centralized financial system. In liquidity pools, the funds are replaced by cryptocurrencies, and the banks are replaced by various liquidity pools (smart contracts).

If you are depositing your assets against a liquidity pool, you provide liquidity to that particular pool. You are the Liquidity Provider (LP). The assets you deposited will be used for lending. There will be borrowers who request funds from the liquidity pools. You are rewarded for your act of lending the assets. Crypto lending is a fair concept where funds are transferred from a person without any immediate use case to those who are in desperate need of money. This increases the amount of work done by digital assets in the market. It is better to put lend your assets rather than keeping it idle in the wallet.

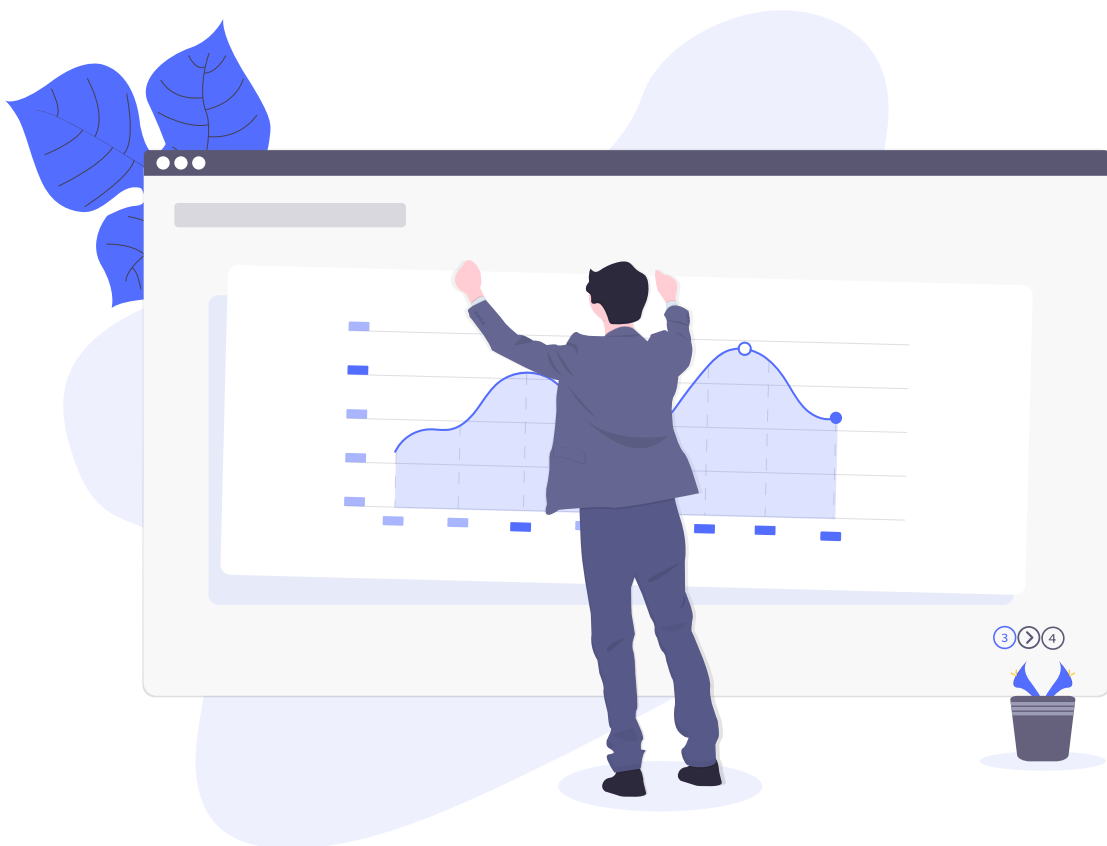

2) UNISWAP PAIR EXPLORER

With Swapsan uniswap pair explorer, you can explore Uniswap exchange pair to find the best opportunity to invest. When a liquidity pool is created on Uniswap, it is actually done with two tokens. The liquidity pool creators will mention the initial liquidity to both tokens for price discovery. By knowing the possible pairs on Uniswap, you can easily add liquidity to that particular pool and get great returns.

3) ADVANCED ANALYTICS TOOL

Swapscan always focuses on maintaining service quality. Swapscan understands the need for customer satisfaction and provides them all possible solutions with the help of bespoke technology. Swapscan provides its users, a top-notch analytics tool that helps them analyze various situations and take required actions. Swapscan's analytics tools help its users gain valuable insights about the liquidity process. It makes data analytics easy. It helps you make the right decision even if you have no idea about data analysis. The user interface is so simple, that you need not be a geek or nerd to make predictions from the data. You can get all you wanted with some few clicks. Also, the analytics tool comes with prebuilt statistical graphs for easy visualization.

SWAPSCAN REVOLUTIONIZES YOUR INVESTMENT

With Swapsan you need not depend on investment systems that hinge on third-party payment processors or other financial institutions. Swapsan gives you the list of investment pools that are genuine and trustworthy. Since, these investments are associated with blockchain technology, your investments are safe. Every single transaction is recorded on the blockchain. The copy of this transactions lies is widely distributed in all nodes in the blockchain unlike centralized systems where the data lies in one location making it easy for the hackers to tamper the data. Swapsan offers good investment opportunities for people of any financial climate.

SWP - THE NATIVE COIN OF SWAPSCAN

SWP is the native token of Swapsan network. It is nothing but a cryptocurrency that has a particular use case. You can add liquidity to the SWP-ETH pool and 0.3% of all trades. SWP token's supply is regulated to ensure that there is a demand in the market. When there is an increasing demand, the token experiences price inflation. The SWP token holders can enjoy a lot of benefits. The token is being listed in almost all the leading exchanges making it easy for the users to trade them easily. SWP can be used to provide liquidity to Sushishine pool as well.

When you provide SWP tokens to the SWP-ETH liquidity pool, you earn daily returns for the liquidity you provided.
